

Start the sandbox:

Find the contract in the sandbox

Click on the contract name in the sidebar to interact with it:

Fill the necessary arguments and press call to run a function:

Contract

b : uint256

Call

test

str : bytes32

Call

named

name : bytes32

Call

^ Advanced

Close

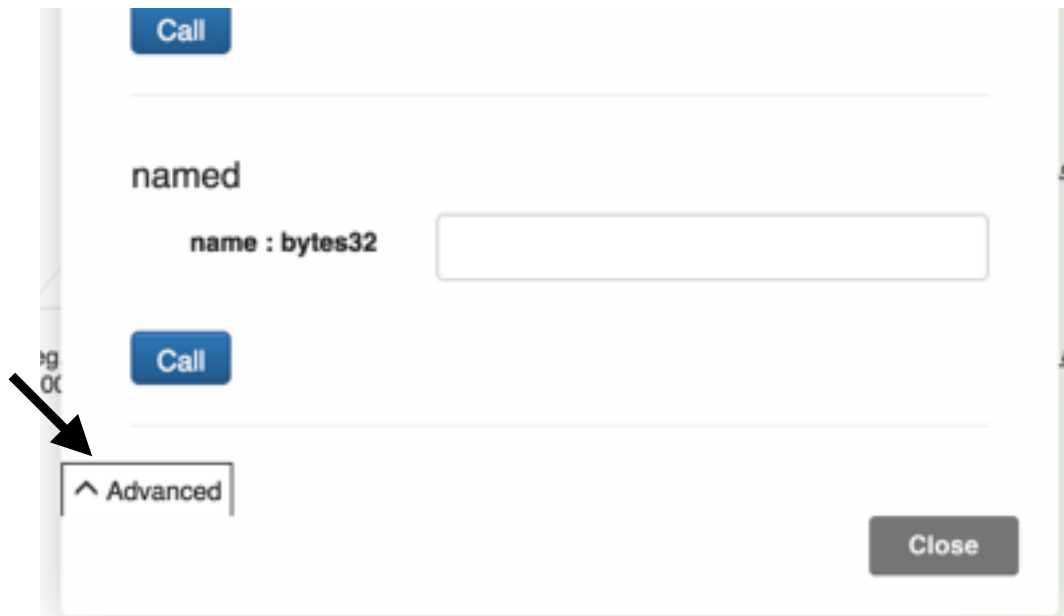

Run the function

Argument

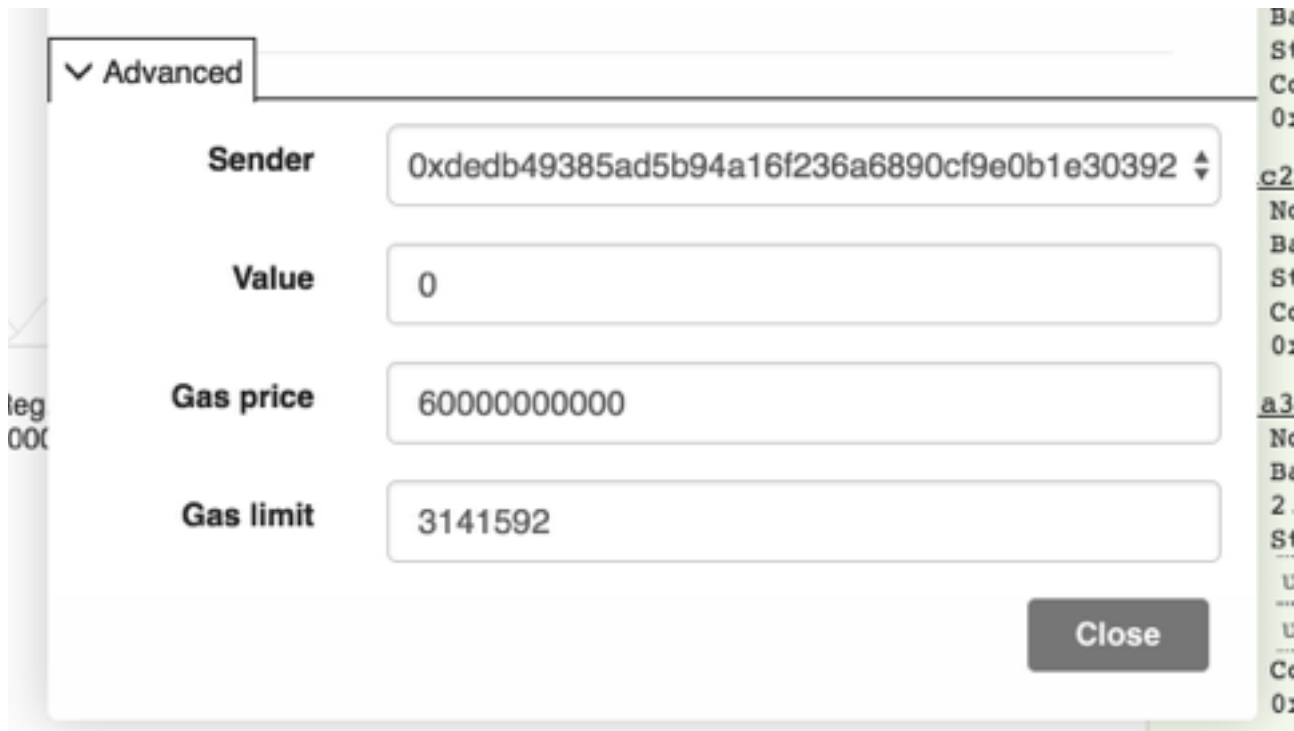

Events are displayed in the console:

To send a transaction with ether or from a different account use the “advanced” option:

This screenshot shows a transaction form with a 'Call' button at the top. Below it is a section labeled 'named' with a sub-label 'name : bytes32' and an empty text input field. At the bottom left, there is a button labeled '^ Advanced' which is highlighted by a black arrow. To the right of this button is a 'Close' button.

This screenshot shows the 'Advanced' transaction form. It has a dropdown menu at the top left labeled 'v Advanced'. The form contains four input fields: 'Sender' with the value '0xdedb49385ad5b94a16f236a6890cf9e0b1e30392', 'Value' with the value '0', 'Gas price' with the value '60000000000', and 'Gas limit' with the value '3141592'. A 'Close' button is located at the bottom right.

To send to the default function, go to the transaction overview:
